                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to nucleic acid molecule, designated CD2000 which encodes a polypeptide containing immunoglobulin (1g) and 1g-like domains useful for treating disorder such as immunoglobulin (1g) and 1g-like domains useful for treating disorder such as immune proliferative disorders, immune disorders (e.g. carcinoma), viral infection, autoimmune disorders (e.g., arthritis, multiple sclerosis, Grave's disease, and Hashimoto's disease), T cell disorder (e.g. acquired immune deficiency syndrome (AIDS)), inflammatory bowel disease (e.g. rheumatoid arthritis and osteoarthritis), allergic inflammatory disorders (e.g. sthma and psoriasis), apoptotic disorders (e.g. systemic lupus erythematosus, and insulin-dependent diabetes mellitus), cytotoxic disorders, septic shock, chronic obstructive pulmonary disease (e.g. emphysema), bronchitis, carhesis, acute myeloid leukaemia, haemophilia and anaemia. CD2000 DNA is used in gene therapy. CD2000 DNA is useful in screening assays, detection assays cache therapy. CD2000 DNA is useful in screening assays, monitoring clinical trials and pharmacogenomics), and in methods of treatment (e.g. therapeutic and prophylactic). The present sequence is human CD84 DNA
                                                                                                                                                                                                                                                                                                                                 Novel isolated polypeptide containing immunoglobulin and immunoglobulin-
like domains and SLAM associated protein, termed CD2000 or CD2001, useful
for treating immune, inflammatory, or hepatic circulatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            221
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                281

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to treating a subject having a condition that benefits from modulating the balance of regulatory T cell function calative to effector T cell function, or vice versa, in a subject. The method involves administering an agent that modulates the expression or activity of a molecule selected from PTGER2 and TGFbetal, or Jagged-1, CMPS-1, CMPS, SEP-R, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-3, PSG-6, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-9, PDE-4d, and PI-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG-1, PSG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  429
                                                                                                                                                                                                                                         which comprises obtaining a lirst soft tissue sample from an individual and a normal soft tissue sample from the same or different individual determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated but of the invention. The current sequence is that of a human soft tissue sarcoma upregulated but of the invention. The current sequence is that of a shown within the

This sequence represents a nucleic acid molecule designated Gene 164 from the human cDNA clone HSAMF26 (deposited as clone ATCC 97903 and ATCC 209049) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-075912; amino acid sequences AAW74731-WY5050 which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polypurcleotides.

Specific uses are described for each of the 186 polynucleotides, based on which lissues they are most highly expressed in (see AAV59511 for described uses)

```

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a a sequences also given in the specification. The protein is used in a a pharmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmum diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, pacebrovascular disorders e.g. corneal infection. The polypeptides can also be used to aid wound confluence of primary tissues, to regenerate tissues and in chemotaxis. The culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, coffactors and other nutritional components. The present sequence represents a cDNA derived from a gene , Rosen CA, Fischer CL, Soppet DP, Carter KC; DR, Endress GA, Yu G, Ni J, Feng P, Young PE, Greene JM; M, Duan R, Hu J, Florence KA, Olsen HS, Ebner R, Brewer LA; , Shi Y, Lafleur DW, Li Y, Zeng Z, Kyaw H; New isolated human secreted protein for diagnosing, preventing, treating or ameliorating medical conditions and used as a food additive or Example 1; SEQ ID NO 174; 129pp; English.

The present invention relates to the isolation of nover numbal Becreted proteins and the polynucleotide sequences encoding them. The invention also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins are useful for preventing, treating, sequences for the secreted proteins are useful for preventing, treating, ambliorating or diagnosing medical conditions such as hyperproliferative disorders (e.g. leukaemia or breast cancers), wounds, reproductive disorders (e.g. leukaemia or breast cancers), wounds, reproductive thrombocytopaenia), immunodeficiencies (e.g. Wiskott-Aldrich syndrome or thrombocytopaenia), immunodeficiencies (e.g. Wiskott-Aldrich syndrome or thrombocytopaenia), autoimmune disorders (e.g. Wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. Wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. AlbS or sepsis), renal control or fungal infections (e.g. AlbS or sepsis), renal disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, cerebral ischaemia or congenital heart defects), respiratory disorders (e.g. Achaemiae), and inflammations (e.g. Crohn's disease). The polymucleotide or polypeptide may also be used as vaccine adjuvants.

ACD82641-ACD82950 encode human secreted proteins or their fragments. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the New genes and its encoded prostate cancer antigen proteins, useful for preventing, treating, ameliorating or diagnosing e.g. prostate cancers, thymic hypoplasia, multiple sclerosis, AIDS, angina pectoris or cerebral present invention relates to the isolation of novel human secreted Ferrie AM; Kyaw H; Ebner R; Ruben SM, Rosen CA, Soppet DR, Carter KC, Bednarik DP; Endress GA, Yu G, Ni J, Feng P, Young PE, Greene JM, Duan DR, Hu J, Florence KA, Olsen HS, Fischer CL, Ebne Brewer LA, Moore PA, Shi Y, Lafleur DW, Li Y, Zeng Z, USPTO web site at seqdata.uspto.gov/psipsDIDEntry.html Claim 4; SEQ ID NO 174; 260pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LeuMetAlaSerValAsnSerThrCysAsnValThrLeuThrCysSerValGluLysGlu 160
                                                                                                                                                                                                                                                                                                                                                                               The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding a polynpeptide, or its fragment, domain, epitope or species homologue; or a polynucleotide that hybridises under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or amelicament for diagnosing, preventing, treating or amelicating a medical protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 410

The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, selective IgA transient hypogammaglobulinemia of infancy, Burkitt's IgA transient hypogammaglobulinemia of infancy, Burkitt's IgA propersonal intermediate Iyanhoma, follicular lymphoma, type II chremediate Iyanhoma, follicular lymphoma, type II chremediate Iyanhoma, follicular lymphoma, intermediate Iyanhoma, follicular lymphoma, con intermediate Iyanhoma, selective is the Iga or ankylosing spondylitis. The PRO proteins are also useful for propering a condition that is responsive to the PRO protein, e.g. cancer or immune mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and gene mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       164

The invention relates to a novel isolated nucleic and and the FRO polypeptide encoded by it. A protein of the invention has antidiabetic, dermatological, antipsoriatic, antiallergic, osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic, antiasthmatic, hepatotropic, and respiratory activity. A polymuclectide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the companied is useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, cystemic sclerosis, and idopathic inflammatory myopathy, Sigren's systemic sclerosis, and idopathic inflammatory myopathy, Sigren's systemic sclerosis, and idopathic inflammatory myopathy, Sigren's systemic sclerosis, and disease, a demyelinating disease of the central or peripheral nervous cystem, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, corrents or autoimmune chronic active hepatitis, primary disease, infectious or autoimmune chronic active hepatitis, primary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Mulple's clisease, an autoimmune or immune-mediated skin disease, a bullous skin disease, asthma, allergic rhinitis, atopic dermatitis, psoriasis, an allergic chisease, asthma, allergic rhinitis, atopic dermatitis, food the costnophilis pneumonia, idopathic polymonary fibrosis, hypersensitivity or costnophilis pneumonia, interpreted sease, asthmassitivity, an immunologic disease of the lung, contained the processe, processed to the presensitivity of preumonitis, an immunologic disease of the lung, costnophilis pneumonia, indopathic pneumonia, remained the present sentined encodes a PRO protein of preumonia, processed the processes of parts of the present sentined the present sentined and processes of the preumonia processes and processes and processes 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    284

Diagnosing susceptibility to schizophrenia (SC2) in a patient, by determining presence or absence of an allele of a linked polymorphic marker present on chromosome 1q22, were the marker is linked to a variant
                                                                                                                                                                                                                                  This sequence was isolated using the method of the invention as the SCZ gene. This sequence has been previously identified as CD84, GenBank Accession No. NM 008874. CD84 is a 73 kDa antigen present on platelets, monocytes and circulating B cells. The proteins encoded by this sequence may be involved in the processes by which the brain responds to biological stimuli. Therefore they may provide targets for therapeutic intervention in the treatment of schizophrenia. The SCZ sequence may be used in a new method comprises determining the presence or absence of an patient. The method comprises determining the presence or absence of an allele of a linked polymorphic marker in the DNA of the patient. The polymorphic marker is present in chromosome 1422 and is linked to a gene (SCZ) having a variant form associated with a phenotype of schizophrenia
                                                                                                                                                                                                                 Claim 19; Page 68-70; 82pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                   The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma the method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 311

The invention relates to an isolated polypeptide (I) associated with breast cancer which is encoded by a nucleic acid molecule comprising a nucleocide sequence (SI). Further disclosed is an antibody that binds to the polypeptide of the invention. The activity of the polypeptide of the invention may be described as cytostatic. The antibody is useful for detecting the presence of (I) in a sample. Nucleic acid molecules of the invention are useful in the detection of breast tumours. (I) is useful as a marker for breast cancer and in breast cancer therapy. Sequences given in records ACN78851-ACN92934 represent nucleic acid markers associated with breast cancer. Note: The sequence listing does not form part of the specification but may be obtained in electronic format from the USPTO web site at seqdata.uspto.gov/sequence.html?DocID=20030099974

human secreted proteins, and encode the proteins given in AAX12521 to human secreted proteins, and encode the proteins given in AAX12521 to AAX12668, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producins secreted human gane products. They can also be used to develop products for diagnosis and therapy. The proliferation/differentiation activity, veal proliferation/differentiation activity, reproductive hormone regulating activity, chemotactic/ chemokinetic activity, hemotactic/ chemokinetic activity, hemostatic activity, antiinflammatory thrombolytic activity, receptor/ ligand activity, antiinflammatory activity, tumour inhibition activity or other activity antiinflammatory call be used in forensic, gene therapy and chromosome mapping promoter.
                                                                                                                                                                                                               MetGluAspAlaGlyAspTyriysAlaAspIleAsnThrGlnAlaAspProTyrThrThr 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating, and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MetAlaGlnHisHisLeuTrplleLeuLeuCysLeuGlnThrTrpProGluAlaAla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21 GlyLysAspSerGluIlePheThrValAsnGlyIleLeuGlyGluSerValThrPhePro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New peptide useful as a marker for the diagnosis of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 748 BP; 246 A; 164 C; 164 G; 171 T; 0 U; 3 Other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 557,
